

A Glimpse of Information and Communication Technology

U Phyu*

Abstract

Information in the long run for both administration and business had been distributed by means of handwriting. Later was typewriting was employed trust person or own or postman. In Modern time this business was undertaken through telegraphic system, which was not as effective as in the past because information was leaked out. In present time mechanism applying various devices for Information and Communication Technology has been utilized, which is more effective compared with former two systems. The main aim of this study is understanding how Information and Communication Technology is effective and useful. The objective of this study is to create more effective and beneficial devices in applying Information and Communication Technology. Hypothesis under this study is inventing effective devices in Information and Communication Technology is possible with attempts and efforts. The problems under this study are investigating mechanism by which can be solved whatever issue occurs in employing Information and Communication Technology. It can be concluded creating better devices in applying Information and Communication Technology than systems employed previously for bitterness of communities leading to societies and the countries to the Better World.
